

# Smart Phone Enabled R/C Car With JoyXtix Transmitter

1 / 3  
03/2011 Rev 1.0

We are excited to introduce you the latest R/C Toy Car controlled by smart phones such as Android Phone / iPhone via JoyXtix Transmitter. With the increasing popularity worldwide, smart phone is not just our essential daily communication device, business tool and social networking window, but also a private entertainment center. And now we are extending it further to allow the smart phone to become a controller of R/C Toy Car for amazing physical toy interaction experience.

With a simple installation of JoyXtix Dongle (by connecting it into your smart phone's 3.5mm headphone jack) with an AAA battery running 27 MHz / 49 MHz or 2.4GHz RF transmission frequency (pending & pairing with the R/C Car's receiver frequency) and downloading JoyXtix application software from Android Market for Android Phone or iTunes for iPhone/iPad/iPad 2/iPod Touch respectively, then you are all set to enjoy the exciting experience of driving R/C Car with your smart phone. You may tilt or touch / drag your smart phone to drive, move, even drift the R/C Car easily and also zip around corners in no time. Moreover, the R/C Car itself is an elegant miniature replica of the actual car that can also be a decorative device on your desk when not playing.

The R/C Car with JoyXtix Transmitter for your smart phone is a perfect gift set for young and adult alike that will bring excitement & joy for you and your family.
